

Sure! Here are some additional steps for deploying the project:

3. ****Set up a Virtual Environment:****

- * We created a new virtual environment using Python's ``venv`` module.
- * We activated the virtual environment and installed the necessary dependencies using ``pip``.

4. ****Deploy to Heroku:****

- * We created a new Heroku app and set up a new database.
- * We pushed our code to the Heroku repository and set up the necessary environment variables.
- * We configured the Heroku app to use the virtual environment we created.
